Common EASA Module 5 Questions and Answers

1. What are the main human factors affecting maintenance safety?

Answer: The primary human factors include:

- Communication breakdowns: Misunderstandings or lack of clear information.
- Fatigue: Reduced alertness and decision-making ability.
- Stress: Impaired concentration and increased error risk.
- Work environment: Poor lighting, noise, or clutter.
- Training deficiencies: Lack of proper skills or knowledge.

- Encouraging reporting of errors or near misses without blame.
- Fostering a safety culture

that values communication and teamwork. - Managing workload to prevent fatigue.

3. What is the Swiss Cheese Model of accident causation?

Answer: The Swiss Cheese Model, developed by James Reason, illustrates how accidents occur when multiple layers of defenses and safeguards (represented as slices of Swiss cheese) have holes or weaknesses aligned. When these holes align across layers, an error or hazard can pass through all defenses, leading to an incident. This model highlights the importance of multiple safety barriers and proactive risk management.

4. Describe the importance of human factors in maintenance error prevention.

Answer: Human factors are crucial because most maintenance errors are caused by human actions or omissions. Understanding these factors helps in: - Designing better work environments. - Developing effective training programs. - Implementing error-proofing techniques. - Creating systems that account for human limitations while enhancing strengths.
