Common Python Interview Questions on Mettl

The following sections highlight typical questions asked during Mettl assessments, categorized based on difficulty and topic.

Basic Python Questions

1. What are Python's key features? - Easy to read and write - Interpreted language - Dynamically typed - Supports multiple paradigms (procedural, object-oriented, functional) - Extensive standard libraries

2. Explain Python data types with examples. - Numeric types: ``int``, ``float``, ``complex`` - Sequence types: ``list``, ``tuple``, ``range`` - Text type: ``str`` - Mapping type: ``dict`` - Set types: ``set``, ``frozenset`` - Boolean: ``bool``

3. How does Python handle memory management? - Python uses an automatic garbage collector for memory management. - Memory is allocated dynamically for objects and deallocated when no longer in use.

4. What are Python functions? How are they defined? - Functions are blocks of reusable code. - Defined using the ``def`` keyword:

```
def greet(name): return f"Hello, {name}"
```

Intermediate Python Questions

1. **Explain list comprehensions with examples.** - Concise way to create lists: `squares = [x2 for x in range(10)]`
- Enhances code readability and efficiency. 2. **What is the difference between `deepcopy` and `copy`?** - `copy()` creates a shallow copy; nested objects are references. - `deepcopy()` creates a new object and recursively copies nested objects. 3. **Describe Python's exception handling mechanism.** - Uses `try`, `except`, `else`, and `finally` blocks. - Example: `try: result = 10 / 0 except ZeroDivisionError: print("Cannot divide by zero")` 4. **What are Python decorators?** - Functions that modify the behavior of other functions. - Syntax: `def decorator(func): def wrapper(): print("Before function call") func() print("After function call") return wrapper`

Advanced Python Questions

1. **Explain Python generators and their advantages.** - Generators produce items lazily, saving memory. - Created using `yield`: `def count_up_to(n): count = 1 while count <= n: yield count count += 1` 2. **Discuss Python's GIL (Global Interpreter Lock) and its impact on concurrency.** - GIL allows only one thread to execute Python bytecode at a time. - Limits true parallelism in multi-threaded programs, affecting CPU-bound tasks. - Multi-processing can be used to achieve parallelism. 3. **What are metaclasses in Python? Provide a use case.** - Metaclasses define how classes behave. - Used for class customization, validation, or automatic method addition. - Example: `class Meta(type): def __new__(cls, name, bases, dct): dct['created_by'] = 'MetaClass' return super().__new__(cls, name, bases, dct) class MyClass(metaclass=Meta): pass` 4. **Describe the concept of Python's context managers and the `with` statement.** - Context managers handle setup and teardown actions. - The `with` statement simplifies resource management: `with open('file.txt', 'r') as file: data = file.read()`
