1. Valuation and Investment Analysis

Build discounted cash flow (DCF) models, comparable company analyses, and precedent transactions to value assets or companies.

2. Capital Budgeting

Assess project feasibility through net present value (NPV), internal rate of return (IRR), and payback period calculations.

3. Financing Decisions

Analyze optimal capital structure, debt capacity, and cost of capital using scenario analysis.

4. Mergers and Acquisitions

Perform synergy analysis, deal structuring, and accretion/dilution calculations with detailed models.

Practical Tips for Mastering Financial

Modelling in Excel

To accelerate your learning and proficiency:

1. **Start Simple:** Build basic models before progressing to complex ones.
2. **Use Templates:** Study industry-standard templates to understand best practices.
