Detailed Analysis of MCQ Answers and Concepts

1. Types of Biodiversity

Question: Which of the following best describes genetic

diversity?

- a) Variety of ecosystems in a region
- b) Variability of genes within a species
- c) Different species living in an ecosystem
- d) Diversity of habitats across the globe

Correct Answer: b) Variability of genes within a species

Explanation:

Genetic diversity pertains to the variation of genes within a particular species. It is critical for the adaptability and survival of species, especially in changing environments. High genetic diversity allows species to withstand diseases, environmental changes, and other threats.

Additional Types of Biodiversity:

1. Species Diversity: The variety of species within a region.
2. Ecosystem Diversity: The range of different ecosystems on Earth.
3. Genetic Diversity: Variations within species.

Importance: Recognizing these types helps in tailoring conservation strategies effectively.

1. Causes of Biodiversity Loss

Question: Which of the following is NOT a major cause of biodiversity loss?

- a) Habitat destruction
- b) Pollution

c) Sustainable resource management

d) Overexploitation

Correct Answer: c) Sustainable resource management

Explanation:

Sustainable resource management aims to use resources responsibly without depleting them, thus supporting conservation efforts. The other options—habitat destruction, pollution, overexploitation—are primary drivers of biodiversity decline.

Common Causes Include:

1. Deforestation for agriculture, urbanization
2. Pollution of air, water, and soil
3. Overhunting, overfishing
4. Introduction of invasive species
5. Climate change

Significance: Addressing these causes is fundamental for effective conservation policies.

1. Conservation Strategies

Question: Which of the following is an in-situ conservation method?

a) Botanical gardens

Correct Answer: c) National parks

Explanation:

In-situ conservation involves protecting species in their natural habitats, such as national parks, wildlife sanctuaries, and biosphere reserves.

Other options:

1. Botanical gardens, seed banks, and gene banks are considered ex-situ conservation methods, where species are maintained outside their natural habitats.

In-situ Conservation Advantages:

1. Preserves ecological dynamics
2. Maintains natural evolutionary processes
3. Supports habitat connectivity

Ex-situ Strategies: Useful when species are critically endangered or habitats are severely degraded.
