## Notes

**Quantitative Methods CFA Level 1 Notes** Quantitative Methods form a foundational pillar of the CFA Level 1 curriculum, equipping candidates with the analytical tools needed to interpret financial data, assess risk, and make informed investment decisions. Mastery of these concepts is crucial for understanding the quantitative techniques used in asset valuation, portfolio management, and risk analysis. This article provides a comprehensive overview of the key topics covered under Quantitative Methods in CFA Level 1, structured to facilitate systematic learning and mastery.

## Introduction to Quantitative Methods

### Definition and Importance

Quantitative Methods involve the application of mathematical and statistical techniques to analyze financial data. They enable investors and analysts to quantify risk, evaluate performance, and develop models for forecasting and decision-making. Given the data-driven nature of modern finance, proficiency in these methods is indispensable.

### Role in CFA Curriculum

Within the CFA Level 1 curriculum, Quantitative Methods serve as the backbone for understanding more advanced topics such as valuation, portfolio management, and derivatives. They provide the tools to interpret and manipulate data accurately and efficiently, forming the basis for sound investment analysis.

## Basic Concepts and Terminology

### Types of Data

Understanding different data types is essential for selecting appropriate analytical techniques:

1. **Qualitative Data:** Non-numeric data such as opinions, descriptions, or classifications.
2. **Quantitative Data:** Numeric data that can be measured and analyzed statistically, including:
  1. Discrete data: Countable data (e.g., number of transactions).
  2. Continuous data: Data that can take any value within a range (e.g., stock prices).

### Descriptive Statistics

Tools to summarize and describe data:

1. **Measures of Central Tendency:** Mean, median, mode.
2. **Measures of Dispersion:** Range, variance, standard deviation, coefficient of variation.
3. **Skewness and Kurtosis:** Measures of asymmetry and peakedness of data distribution.

# Probability Concepts

## Probability Basics

Fundamental to risk assessment, probability quantifies the likelihood of events:

1. Events can be independent or dependent.
2. Probability ranges from 0 to 1.

## Probability Rules

1. **Addition Rule:** For mutually exclusive events, the probability that either occurs is the sum of their probabilities.
2. **Multiplication Rule:** For independent events, the probability that both occur is the product of their probabilities.

## Conditional Probability and Bayes' Theorem

Understanding how the probability of an event changes given new information:

1. Conditional probability:  $P(A|B) = P(A \text{ and } B) / P(B)$ .
2. Bayes' Theorem allows updating probabilities based on new evidence.

## Probability Distributions

### Discrete Distributions

Examples include:

1. **Binomial Distribution:** Models the number of successes in a fixed number of independent Bernoulli trials.
2. **Poisson Distribution:** Models the number of events occurring within a fixed interval.

### Continuous Distributions

Examples include:

1. **Normal Distribution:** Symmetric, bell-shaped distribution characterized by mean and standard deviation.
2. **Lognormal Distribution:** Used for modeling asset prices.
3. **Exponential Distribution:** Models waiting times between events.

## Sampling and Estimation

### Sampling Techniques

Methods to select representative data:

1. Simple Random Sampling

2. Stratified Sampling
3. Systematic Sampling
4. Cluster Sampling

## Estimation of Population Parameters

Using sample data to estimate:

1. **Point Estimates:** Single value estimates (e.g., sample mean).
2. **Interval Estimates:** Range (confidence interval) within which the parameter lies.

## Sampling Distributions

Distribution of a statistic over many samples, key for hypothesis testing and confidence intervals:

1. Central Limit Theorem states that the sampling distribution of the sample mean tends toward normality as sample size increases.

## Hypothesis Testing

### Formulating Hypotheses

- Null hypothesis ( $H_0$ ): No effect or difference. - Alternative hypothesis ( $H_1$ ): There is an effect or difference.

### Types of Tests

1. Z-test: For large samples with known variance.
2. T-test: For small samples or unknown variance.
3. Chi-square test: For categorical data.

### Decision Making

- Based on p-values or critical values. - Significance level ( $\alpha$ ) commonly set at 0.05. - Reject  $H_0$  if p-value  $< \alpha$ .

## Correlation and Regression

### Correlation Analysis

Measures the strength and direction of the linear relationship:

1. **Pearson's Correlation Coefficient ( $r$ ):** Ranges from -1 to +1.
2. Correlation does not imply causation.

### Simple Linear Regression

Modeling the relationship between a dependent variable (Y) and an independent variable (X):

1. Regression Equation:  $Y = a + bX + \epsilon$ .

## 2. Parameters:

1. Intercept (a): Expected value of Y when X=0.
2. Slope (b): Change in Y for a one-unit change in X.

## Assessing Model Fit

- R-squared: Proportion of variance explained. - Residual analysis: Check for patterns indicating model inadequacy.

## Time Value of Money (TVM)

### Present and Future Value

- Present Value (PV): Value today of a future sum. - Future Value (FV): Value at a future date of a present sum.

### Key Formulas

1.  $FV = PV \times (1 + r)^n$
2.  $PV = FV / (1 + r)^n$

Where r is the interest rate per period, and n is the number of periods.

### Applications

- Discounting cash flows. - Annuities and perpetuities.

## Portfolio Risk and Return

### Expected Return

Weighted average of possible returns:

1. Expected Return =  $\Sigma (\text{probability} \times \text{return})$

### Portfolio Variance and Standard Deviation

Measures of total risk:

1. Variance considers the dispersion of returns.
2. Standard deviation is the square root of variance.

### Correlation and Diversification

- Combining assets with low or negative correlations reduces overall portfolio risk.
