1. **Snout:** The pig's nose, used for sensing and rooting.
2. **Forelimbs and Hindlimbs:** The legs used for movement.
3. **Ventral Side (Underside):** The belly area where the reproductive and urinary openings are located.
4. **Vaginal Opening:** Located near the anus, used for reproductive purposes.
5. **Urogenital Opening:** The external opening for the urinary and reproductive tracts, often located near the vaginal opening.
6. **Umbilical Cord:** Connects the fetus to the placenta, providing nutrients and oxygen during development.

Internal Anatomy of Female Fetal Pig

The internal structures of the female fetal pig are complex and include vital organs involved in reproduction, digestion, excretion, and circulation.

Reproductive System

Understanding the female reproductive anatomy is fundamental:

1. **Ovaries:** Small, oval-shaped organs that produce eggs and hormones such as estrogen and progesterone.
2. **Oviducts (Fallopian Tubes):** Tubes through which eggs travel from the ovaries to the uterus.
3. **Uterus:** The site of fetal development; in pigs, it is bicornuate

(having two horns).

4. **Cervix:** The opening at the lower end of the uterus leading to the vagina.
5. **Vagina:** The canal that leads to the outside of the body, through which the pig gives birth and copulates.

Other Major Organs

The fetal pig also contains essential organs for other bodily functions:

1. **Heart:** Located in the thoracic cavity, pumps blood throughout the body.
2. **Lungs:** Responsible for gas exchange during respiration.
3. **Digestive System:** Comprising the stomach, intestines, liver, pancreas, and other structures.

Simulated Dissection of Female Fetal Pig: Step-by-Step Guide

Performing a simulated dissection allows students to identify and understand the spatial relationships between organs. Below is a step-by-step guide, including typical worksheet questions and their answers.

Preparation and Safety

Before beginning dissection, ensure: - You have all necessary tools: scissors, forceps, dissecting pins, and gloves. - The workspace is clean and well-lit. - You understand safety protocols, including handling sharp instruments carefully.

Dissection Steps

1. External Inspection: - Identify the external features: snout, limbs, umbilical cord, and reproductive openings. - Note the position of the vaginal and urogenital openings. 2. Opening the Abdominal Cavity: - Use scissors to make a midline incision from the sternum to the pubic area. - Carefully peel back the skin and muscles to expose internal organs. 3. Locating the Reproductive Organs: - Identify the uterus, which appears as a pair of horns extending into the abdominal cavity. - Find the ovaries located near the kidneys or attached to the uterine horns. 4. Identifying the Uterus and Ovaries: - The uterine horns are elongated and may contain developing fetal structures. - The ovaries are small, oval bodies near the uterine horns. 5. Examining the Urinary and Digestive Systems: - Trace the path of the kidneys to the bladder. - Locate the stomach, intestines, liver, and pancreas.

Worksheet Questions and Answers for Female Fetal Pig Dissection

Providing answers to common worksheet questions enhances understanding and helps students verify their findings.

Question 1: Where are the ovaries located in the fetal pig?

Answer: The ovaries are located near the kidneys, attached to the uterine horns or positioned within the abdominal cavity close to the dorsal body wall.

Question 2: Describe the structure and function of the uterus in the fetal pig.

Answer: The uterus is a bicornuate (having two horns) structure that connects to the ovaries via the oviducts. Its function is to support fetal development during pregnancy.

Mastery of these features requires familiarity with the anatomy and the ability to distinguish similar-looking tissues and organs.

Female Reproductive System in the Fetal Pig

Overview of Reproductive Anatomy

The female reproductive system in fetal pigs is complex yet well-organized, reflecting its vital role in development. Key components include:

1. Ovaries
2. Fallopian Tubes (Uterine Tubes)
3. Uterus (including horns)
4. Vagina
5. Vulva
6. Placenta and associated structures

Ovaries

Located near the kidneys, the ovaries are small, oval-shaped organs responsible for egg production and hormone secretion. During dissection, they are typically found on either side of the reproductive tract, attached to the mesovarium, a membrane that connects them to the broad ligament.

Function:

1. Produce ova (eggs)
2. Secrete hormones such as estrogen and progesterone

Identification Tips:

1. Look for small, oval structures along the dorsal body cavity
2. Often connected to the uterine horns via the ovarian ligament

Fallopian Tubes (Uterine Tubes)

These slender tubes extend from the ovaries toward the uterus. They are crucial pathways for eggs to travel from the ovaries to the uterus.

Function:

1. Transport eggs from ovaries to uterus
2. Site of fertilization in many mammals

Identification Tips:

1. Find elongated, narrow structures near the ovaries
2. Connect the ovaries to the uterine horns

Uterus

The uterus in the fetal pig is bifurcated into two horns, reflecting the pig's litter-bearing reproductive strategy. The horns are elongated and extend toward the ovaries, with a central body connecting to the vagina.

Function:

1. House developing fetuses
2. Facilitate implantation and gestation

Identification Tips:

1. Look for large, Y-shaped structures in the abdominal cavity
2. Typically located dorsal to the bladder

Vagina and Vulva

The vagina connects the uterus to the outside of the body through the vulva. In the fetal pig, the external opening is often not fully developed, but the passageway can be located in the pelvic region.

Function:

1. Serves as the birth canal
2. Receives sperm during copulation

Identification Tips:

1. Located ventrally to the rectum
2. Can be identified as a small opening in the pelvic area

The Digestive System

Understanding the digestive system complements knowledge of reproductive anatomy, as many organs are situated in close proximity within the abdominal cavity.

Esophagus and Stomach

The esophagus is a tube that carries food from the mouth to the stomach, which is a large, sac-like organ involved in digestion.

Intestines

1. Small Intestine: Responsible for nutrient absorption; includes duodenum, jejunum, and ileum.
2. Large Intestine: Absorbs water and forms feces; includes cecum, colon, and rectum.

Liver and Pancreas

1. Liver: Large, lobed organ that produces bile for fat digestion.

2. Pancreas: Produces digestive enzymes and insulin.

Circulatory System Features

The fetal pig's circulatory system includes major arteries and veins that supply blood to various organs.

1. Heart: Located in the thoracic cavity; chambers include atria and ventricles.
2. Aorta: Major artery distributing oxygenated blood.
3. Vena Cava: Returns deoxygenated blood to the heart.

Muscular and Skeletal Systems

The muscular system provides movement and support. Major muscles like the pectorals and abdominal muscles are visible during dissection.

Interpreting the Simulated Dissection Worksheet

The worksheet typically includes questions such as:

1. "Identify the ovaries and describe their functions."
2. "Trace the path of the fallopian tubes."
3. "Label the uterine horns and explain their significance."
4. "Name the major arteries supplying the reproductive organs."
5. "Describe the location and function of the placenta in fetal development."

Answers and Explanation:

1. Ovaries: Small, oval structures located near the kidneys; responsible for egg production and hormone secretion.
2. Fallopian Tubes: Extend from the ovaries toward the uterus; facilitate egg transport and fertilization.
3. Uterine Horns: Y-shaped extensions of the uterus that house developing fetuses; characteristic of pigs and similar mammals.
4. Major Arteries: Include the ovarian arteries, which supply blood

to the ovaries, and the uterine arteries, which supply the uterus.

5. Placenta: In fetal pigs, the placenta attaches to the uterine wall and functions in nutrient and gas exchange; appears as a sac-like structure during dissection.

Practical Dissection Tips for Students

1. Use careful, gentle techniques to avoid damaging delicate tissues.
2. Identify structures based on their location, size, and texture.
3. Follow the pathway of reproductive tubes from the ovaries to the uterus.
4. Cross-reference labeled diagrams with actual structures during dissection.
5. Take note of variations between individual specimens.
