Core Components

- Present Value (PV): The current worth of a future sum of money.
- Future Value (FV): The amount of money an investment will grow to over time.
- Interest Rates: The cost of borrowing or the return on investment, which influences PV and FV calculations.

Applications

- Discounted cash flow analysis
- Valuation of bonds and stocks
- Capital budgeting decisions

Financial Statements and Analysis

Key Financial Statements

- Balance Sheet: Presents the company's assets, liabilities, and equity at a specific point in time.
- Income Statement: Shows revenues, expenses, and profits over a period.
- Cash Flow Statement: Details cash inflows and outflows from operating, investing, and financing activities.

Financial Ratios Analytical tools derived from financial statements to assess performance, such as:

- Liquidity ratios (e.g., current ratio)
- Profitability ratios (e.g., return on assets)
- Leverage ratios (e.g., debt-to-equity ratio)
- Efficiency ratios (e.g., inventory turnover)

Valuation Techniques

Discounted Cash Flow (DCF) A method that estimates the value of an investment based on its expected future cash flows

discounted to present value. Market Value Approaches - Comparable Company Analysis: Valuing a company based on how similar companies are valued. - Precedent Transactions: Using prices paid for similar companies in past transactions. Capital Budgeting Definition The process of evaluating and selecting long-term investments that are consistent with the firm's goal of maximizing value. Steps Involved

1. Identifying potential investment projects
2. Estimating cash flows for each project
3. Assessing project risks
4. Applying valuation techniques (NPV, IRR)
5. Making investment decisions based on analysis

Cost of Capital Significance Represents the minimum return that investors expect for providing capital to the firm. It serves as a benchmark for evaluating investment opportunities. Components - Cost of Debt: Interest rate on borrowed funds - Cost of Equity: Return required by shareholders - Weighted Average Cost of Capital (WACC): Overall cost considering the proportion of debt and equity Risk and Return in Financial Management Types of Financial Risks - Market Risk: Changes in market variables affecting investments - Credit Risk: Default risk associated with borrowers - Liquidity Risk: Difficulty in converting assets to cash - Operational Risk: Risks arising from internal processes or external events Risk-Return Tradeoff Fundamentally, higher returns are associated with higher risks. Financial managers must balance risk and return to optimize the firm's financial position. Diversification and Portfolio Management - Spreading investments across different assets to reduce unsystematic risk. - Portfolio theory emphasizes the importance of diversification in achieving optimal risk-adjusted returns. Capital Structure and Dividend Policy Capital Structure Decisions Determining the optimal mix of debt and equity financing to minimize the cost of capital and maximize firm value. - Debt Financing: Advantages include tax benefits and increased leverage. - Equity Financing: Offers stability but may dilute ownership. Dividend Policy Deciding how much profit to distribute to shareholders versus reinvesting in the company. - Stable Dividend Policy: Consistent dividends regardless of earnings. - Residual Dividend Policy: Dividends are paid from residual earnings after financing investments. The Ethical and Global Perspective Ethical Considerations Financial managers must adhere to ethical standards to maintain trust and integrity in financial reporting and decision-making. Global Financial Environment Understanding international financial markets, exchange rates, and global economic factors is critical for firms operating globally.
