7. **Scheduling and Dispatching:** Planning the timing of production activities.
8. **Maintenance Management:** Ensuring machinery and equipment are operational.

2. What is the difference between manufacturing and service operations?

While both involve the transformation of inputs into outputs, their key differences are:

- **Tangibility:** Manufacturing produces tangible goods; services are intangible.
- **Customer Involvement:** Services often involve direct customer interaction; manufacturing generally does not.
- **Inventory:** Manufacturing can produce and store inventory; services are produced and consumed simultaneously.
- **Standardization:** Manufacturing processes are often standardized; services may vary based on customer needs.

3. Explain the concept of product lifecycle management (PLM).

Product Lifecycle Management (PLM) is the process of managing a product's lifecycle from inception through design, manufacturing, service, and disposal. It integrates people, data, processes, and business systems to streamline product development, improve quality, reduce time-to-market, and ensure compliance with standards.

4. What are the different types of production systems?

Production systems can be classified into:

1. **Project Production:** Custom, large-scale projects like ships or buildings.
2. **Batch Production:** Producing a specific quantity of a product in batches, such as bakery goods.
